

Appl. No. 09/784,551

AMENDMENTS TO THE SPECIFICATION

IN THE ABSTRACT OF THE DISCLOSURE:

Replace the Abstract of the Disclosure currently of record with the attached new Abstract of the Disclosure.

Appl. No. 09/784,551

IN THE SPECIFICATION:

Please delete the paragraph on page 3, beginning at line 13 through line 17, in its entirety.

Please amend the paragraph on page 4, beginning at line 15 through line 20 with the following amended paragraph:

A<sup>2</sup> --In this connection it should pointed out that ~~by~~ input function mode is meant defined here as a function mode whereby the user can input information into a receiver for storage and processing within ~~this~~ the receiver, as a distinct from the mouse function mode which is used for positioning purposes.--

Please amend the paragraph on page 5, beginning at line 3 through line 15 with the following amended paragraph:

A<sup>3</sup> --Of course, the input unit arrangement can also be suitably arranged to switch from the mouse function mode to the input function mode when the signal-processing device detects ~~another~~ a pattern different than the predetermined position-coding pattern in one of said images, so that an automatic switching is also achieved for the input function mode. The other pattern can be an arbitrary pattern, that is the signal-processing device detects that an image does not contain the predetermined position-

Appl. No. 09/784,551

x3 coding pattern. Alternatively, the switching can also take place on the basis of positive identification of another predetermined pattern, but does not need to be a position-coding pattern.--
